Certificate Expiration Alerter

Certificate Expiration Alerter Free Download connects to a Windows Certification Authority (CA) specified as a command-line parameter. The tool monitors the CA for the upcoming certificate expirations and emails the administrator when a new certificate will expire. When a new certificate is generated, it is saved to a folder specified by the user. If the certificate is to expire, an email is sent to the specified address (providing the certificate has a specified Common Name). Optionally, a regex can be specified to filter out certificates with specific CNs. The administrator must create a Scheduled Task to run the tool once per day. CertificateExpirationAlerter.exe [options] -c -CA --cert -d -days --days --email --regex Schedules a task to run the tool once per day. CertificateExpirationAlerter Licence: GNU GPLv2 (exception is the certification part - only GPL is allowed) Any/All Contributors: Contributed to the CodeProject site by: Jason Tangeret [non-HTML] License: GNU GPLv2 (exception is the certification part - only GPL is allowed) Any/All Contributors: Contributed to the CodeProject site by: Jason Tangeret [non-HTML] Logo: More info: CertificateExpirationAlerter 1.0 Download: The code is available on and is licensed under the GNU GPL v2. If you find this code useful, you may contribute it back to the CodeProject site with the HTML form. CertificateExpirationAlerter -- b7e8fd5c8

Certificate Expiration Alerter

Features: Adds a specific task to run every day. Detects which certificates will expire at the specified day. Sends email notification with expiration date of each certificate. Optionally sends a regex to the email body that filters the certificate CN name. Logs to a specific file the date on which the certificate expires. The Certificate Expiration Alerter application was built using the Windows API to connect to a Windows Certification Authority (CA) and detect which certificates will expire at the defined day. Existing users who need to set an earlier expiration date can do so by either manually editing the Expiration date attribute of the certificate, or via the control panel. The Certificate Expiration Alerter program exports its own Output Expiration Alerter's log file when the schedule runs. You can watch the log file to know when it runs. Create a scheduled task which runs the Certificate Expiration Alerter program, and which runs once per day. Once a certificate expires, the program sends an email to the administrator with the certificate expiry date, the certificate Common Name or subject, and a link to the certificate. Replace with the number of days before the certificate expires, which is specified as the first value of a Command-Line parameter to the Certificate Expiration Alerter program. For example, replace 5 with 5. Recipient Email: The value is the number of days before the certificate expiration. Input Parameter Description: Parameter1 - specifies the path of the Certificate Expiration Alerter command-line utility. Parameter3 - specifies the path of the output file to where the program logs its activity. The default path is the current directory. Parameter5 - specifies the path of the certificate Common Name or Subject attribute to which the exported file will be saved. Parameter6 - specifies the path of the Certificate Expiration Alerter program log file. The default path is the current directory. Installation Prerequisites: Registry Keys: The following registry keys must exist before the Certificate Expiration Alerter program can be run. HKLM\SOFTWARE\Microsoft\Certificates\Computer\Log Date: The value of the registry key should be added to the end of the current time.

What's New in the Certificate Expiration Alerter?

Certificate Expiration Alerter is a Windows Certificate monitoring tool which detects which certificates will expire at the defined day specified as a Command-Line parameter. The administrator receives an email notifying which certificates will expire at the specified day. There is an optional regex parameter to filter certificates with specific Common Names. The administrator must create a Scheduled Task to run the tool once per day. The Certificate Expiration Alerter utility was built as a Command-Line utility. The program connects to a Windows Certification Authority (CA) specified as a Command-Line parameter, and detects which certificates will expire at the defined day specified as a Command-Line parameter. The administrator receives an email notifying which certificates will expire at the specified day. There is an optional regex parameter to filter certificates with specific Common Names. The administrator must create a Scheduled Task to run the tool once per day. Certificate Expiration Alerter Description: Certificate Expiration Alerter is a Windows Certificate monitoring tool which detects which certificates will expire at the defined day specified as a Command-Line parameter. The administrator receives an email notifying which certificates will expire at the specified day. There is an optional regex parameter to filter certificates with specific Common Names. The administrator must create a Scheduled Task to run the tool once per day. The Certificate Expiration Alerter utility was built as a Command-Line utility. The program connects to a Windows Certification Authority (CA) specified as a Command-Line parameter, and detects which certificates will expire at the defined day specified as a Command-Line parameter. The administrator receives an email notifying which certificates will expire at the specified day. There is an optional regex parameter to filter certificates with specific Common Names. The administrator must create a Scheduled Task to run the tool once per day. The Certificate Expiration Alerter utility was built as a Windows Service. The program connects to a Windows Certification Authority (CA) specified as a Command-Line parameter, and detects which certificates will expire at the defined day specified
